

*ABSTRACT AMENDMENTS*

Replace the Abstract with:

~~Provided is a~~ A slide spool valve ~~having~~ has a valve body formed by synthetic resin injection molding. The valve body includes a bore and an ~~insertion material~~ insert integrally coupled with the bore ~~by an insertion molding method~~. The ~~insertion material~~ insert has a hollow portion penetrated by a port, the hollow portion being connected to the bore and having the same diameter as the bore and penetrated by one of ports. A valve room having a large diameter extends from an inner circumferential surface of the hollow portion to the penetrating portion of the port. The ~~insertion material~~ insert is manufactured by die casting and fixed in a metallic pattern of the valve body, so that it is integrally coupled with the valve body by ~~an insertion molding method~~.
